11.6M Filipinos Are Out of School (OSY Rate in the Philippines)

Author: admin

Don't be shocked with the number of out-of-school youths in the Philippines. This does not mean total enrollments are dropping. In fact, enrollments have been increasing by an average of 0.98 percent every year, data from the education department's research and statistics division shows.

Likewise, to some extent, the drop can be explained by changes in the way the education department computes participation rates.

According to latest reports, in the beginning of school year 2002-2003, participation rate was computed based on the age group consisting of 6-11 years old for elementary and 12-15 years old for secondary whereas the previous system used 7-12 and 13-16 years old for elementary and secondary respectively. This means data from school year 2002-2003 onwards cannot be compared with that of previous years.

But data from 2002-2003 to 2006-2007 are already comparable. And they are still exhibiting marked declines in levels of participation. From 90.29 percent in school year 2002-2003, participation rates still fell by 7 percentage points to 83.22
